

POINTERS FOR **SUMMER** **AND FALL**

POULTRY·STOCK & FARM

BY **GEO. H. LEE**
OMAHA, NEB.

COPYRIGHTED BY GEO. H. LEE 1916

them a moderate drink three times a day. Chicks really need but little water.

WHITE diarrhoea is a contagious germ disease and is often transmitted by dirty or contaminated eggs to chicks on hatching. The use of Egg-o-hatch during incubation prevents this trouble and also insures better hatches.

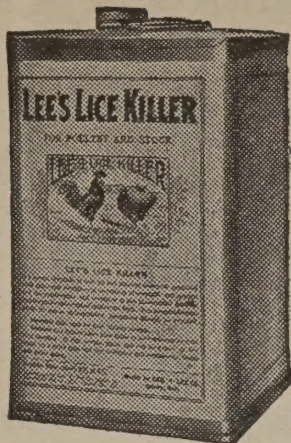

MUCH so-called white diarrhoea is not that disease at all, but is simply the result of overheating, or chilling, or too much water, or too much grain food and not enough vegetables.

GENERALLY a little Germozone in the drinking water is all sufficient to correct the trouble, but in case of real "White Diarrhoea," which may be suspected in case the trouble continues to increase and to spread, we recommend Lee's White Diarrhoea Remedy, which we offer in 12-oz. bottles at 50 cents, or in concentrated form in 1-oz. bottles (to be diluted to 12 ounces with water) at 50 cents postpaid.

IT is also necessary to clean up and disinfect in case of white diarrhoea. Lee's Dip in water can be used for scrubbing incubator walls and brooders, also for spraying runways, etc. A quart of Dip (40 cents) makes 60 quarts of disinfectant. Can be sent only by express or freight or from our dealers.

SCALY leg is an unsightly disease that affects chicks and fowls more during hot weather than any other time. It is caused by a little insect that burrows under the scale of the leg and causes a roughness or whitish scale. I have known chickens' legs to be eaten entirely off with it.

CHICKENS that have scaly legs are generally lousy, and chickens that roost on poles that are occasionally painted with

This illustrates a
gallon can of

LEE'S LICE KILLER

yellow label, yellow
can, red print. Lee's

Lice Killer should properly be called
"Lice and Mite Killer," as it does both,
and also kills bed bugs, scaly leg mites
and other insects affecting poultry or
hogs.

It kills both by vapor and by contact.
It gives double service. Painted on the
roosts, it kills insects with which it
comes in contact, and the vapor arising
from it kills lice on the bodies of the
chickens as they roost over it at night,
also the insect causing scaly leg.

For hogs it is sprinkled or sprayed on
bedding or on rubbing posts.

1 Gal. Can, Express Paid, \$1.50

Lice Killer Not Mailable

Lee's Lice Killer never have scaly legs. Even
when very bad, it will soon disappear when
Lee's Lice Killer is used on the perches, or
quicker if a little of the Lice Killer is rubbed
on the legs and worked in under the scales.

SWAT the rooster. The hens lay better and
the eggs keep better.

LATE chicks are preferably raised on new ground that has not had chicks or fowls on it, steadily, before.

CHICKS out of doors should not be permitted to go more than a few feet from the hen or the brooder until a week or more old, as a sudden storm may bewilder them and catch them away from their shelter.

DON'T let the hen and chicks roam. It is better to keep the hen cooped most of the time, allowing a run of only an hour or two a day.

CHICKS should be kept growing every minute of the time. I don't want to repeat here all about the general feeding and care of chicks, which is fully covered in our other books, but desire only to emphasize the importance of getting them to maturity and to laying at earliest possible moment.

APULLET that lays at 4½ months is not only paying her way after that time, but is a strong, vigorous bird, two to one better than the "lagger." It takes less food, less time and trouble and no worry. Lee's Egg Maker and Chick Grower, coupled with grain and vegetables, turns the trick. "That which best makes a hen lay will best make a chick grow."

ONE is too apt to neglect the growing stock when hot weather arrives, but this is just the season upon which success depends. It doesn't pay to hatch a lot of chicks and then let them die or drag along without proper attention. Don't be like the man who is very attentive to his garden for a week or two and then lets it all run to weeds.

IN warm summer weather a good, motherly old hen can take care of twenty or thirty chicks, but don't try it during chilly spring.

FOOD spoils, rots, or becomes musty or mouldy more quickly during warm weather. Keep all such severely away from chicks. They are as sensitive to ptomaine poisoning as are human babies.

IN the early fall, don't teach the young birds to roost too soon. This often results in crooked breast bone or wry tail, which are objectionable, whether for market or for breeding.

CHICK brooders, coops or colony houses should be kept protected from vermin by filling all of their hiding places with Lee's Lice Killer. Inject it in all corner joints, cracks and crevices, using a small squirt oiler.

DON'T fail to read our books, "Secrets of Success" and "Care of Baby Chicks."

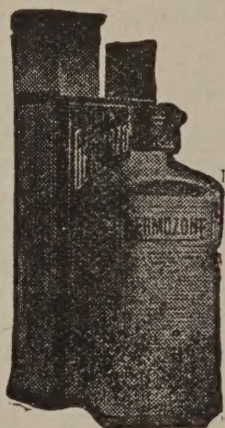

CHICK food or any kind of grain, whole or ground, that is old or damp or suspected of being musty, can be utilized for safe feeding if put into a pan in an oven and well parched or browned. This kills any fungus and germs that may be present.

IF you keep chickens at all, aim to make them profitable. Better to spend a dollar now and then if that dollar saves loss or makes profit. Every hen should be a worker and a profit maker. Every surplus male should be sent to market. Every chick should be pushed to quick maturity and productiveness.

THIS means work, thought, care and attention; also some expense, but it is far better to spend a cent on a hen and get an egg than to spend a half cent and get no egg.

Read Up About the "Lee Way" and Follow It to Success

Germozone Has Been a Home and Farm Remedy for 20 Years

This is Germozone

the liquid form, prepared by us in four sizes:

4 oz. at . . .	\$0.40
12 oz. at . . .	.75
32 oz. at . . .	1.50
Gallon at . . .	4.50

60 Tablet size,	\$0.75
175 Tablet size,	1.50

Tablets available.

GERMOZONE is a most effective remedy for diseases affecting the skin and semi-exterior mucous membrane of man, fowl or beast. It is particularly valuable to have always on hand for first aid treatment and as a preventive through its strong germicidal action.

For Poultry—roup, colds, canker, chicken-pox, sore head, swelled head, cholera, bowel trouble, etc.

For Stock—cuts, sores, wounds, sore eyes or mouth, saddle or harness galls, swellings, skin disease, etc.

For Pet Stock—colds, distemper, wounds, skin disease, illness from spoiled food, etc.

The Crop of a Chicken

A chicken's crop is simply a storage bin for holding food temporarily until used. No act of digestion or assimilation occurs in the crop. But it does make a splendid collecting place and breeding place for germs. Penned-up chickens, or those around the barn-yard, take into the crop, with food, lots of things that are better not there and if you will examine some crops you will find the walls and contents about as unsanitary as the average cess-pool; sour, slimy, filthy, coated, germ infested. You can scald out the water pans or feed hoppers, but you cannot do this with the crop.

Germozone used regularly two or three times a week is the only thing that will safely and surely purify, and render sanitary, a sour, coated or inflamed crop. It heals the inflamed surfaces and makes all sweet and clean, and all without injury to the most delicate bird, even day old chicks.

The regular use of Germozone is also corrective of bowel trouble, poisoning from eating musty or spoiled food, germ infection through drink or food, etc. The regular 3-times-a-week use of Germozone costs but one half cent per hen per month.

In addition, Germozone is the handiest of handy, safe and efficient remedies to have on hand for roup, colds, canker, chickenpox, swelled head, sore head, skin disease, etc.

Keeps hens healthy; saves the Baby Chicks.

The Only Chick That Pays Is the One That Grows Quickly

LICE and mites are the hot weather terrors and one must keep constantly on the lookout and not allow them to get a start. A dozen will breed a million in sixty days.

OLD fowls molt once a year, generally during late summer or early fall. Sometimes young stock will molt during the first season if hatched unusually early in the spring.

MOLTING consists in shedding the summer coat of feathers and growing an entire new and heavier coat for winter. This is a great drain on the fowl and generally a hen will quit laying because unable, from the quantity and kind of food received, to make eggs and feathers at the same time.

IT would not matter so much if the hen quit laying only during the principal time of the molt, but the trouble is that when they once quit it takes a long time to get the egg-making organs working again.

THE best way is to keep them laying right through the molt. It requires judgment and attention. When the molt begins, increase the food and especially the amount of Lee's Egg Maker, which can be increased to ten per cent of the ground feed given.

THEN, when the molt is pretty well over, reduce the amount of Egg Maker to six or seven per cent and the total amount of food to a quantity that will keep the hens just hungry enough to have them busy and scratching most of the time.

OVER-FEEDING of concentrated food, such as grain, meal, meat, etc., with little or no fresh vegetables, causes gout, which is generally evidenced by lameness of one wing or leg. It is always the fattest and finest looking birds that are troubled in this way. They are simply over-fed or with insufficient variety.

GENERALLY this develops later into liver disease and finally into apoplexy, which is generally the trouble when a big, fat hen is found dead under the roosts in the morning. This is easy to prevent, but impossible to cure.

CHICKS in summer are very much troubled with head lice. These lice are extra large and do not run around like the body lice. They bury their heads in the chicken's scalp and stick up perfectly still, so that they are easily mistaken for pin feathers. A little of Lee's Head Lice Ointment applied to the chicken's head and well rubbed in quickly gets rid of them, or ten drops of Lee's Lice Killer mixed with a tablespoonful of lard or vaseline will do the work.

CHICKENS can be worked in connection with the garden to excellent advantage. By setting the rows of vegetables 12 to 18 inches apart and building a hen coop without bottom just sufficiently wide to fit in between the rows of vegetables and with a runway the same width covered with 1-inch mesh wire netting and extending out five feet or ten feet or as far as desired. This enables the hen and chicks to run at liberty in between the rows of vegetables and it can be moved daily or as often as desired in between other rows of vegetables. The chicks will keep the ground clear of weeds and will also keep it loosened up by scratching and yet they cannot harm the vegetables.

THIS has a further advantage of always keeping the chicks on new ground. If desired, the coop itself can be made with a wood bottom and set up an inch or two from the ground as a protection in case of heavy rains. An ordinary cracker box covered on top with tar paper makes a good coop for this purpose.

Adopt a Regular System. Try the Lee Way

AFTER the hatching season is over hens can be fed plenty of lime, oyster or clam shell, etc., as eggs sold for market can have a much heavier shell than eggs used for hatching. This is something that should always be remembered during the spring hatching season—not to feed too much meat, bone, shell, etc., which makes the egg shell tough and hard.

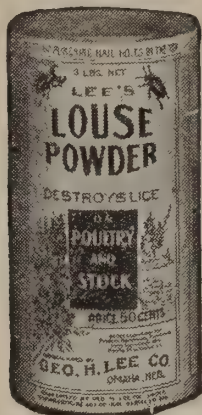

THE writer is very fond of a soft boiled egg for breakfast and often finds eggs where it is almost impossible to cut the top off with a knife. A chick would have absolutely no chance in such a shell.

NOW is the time to select out your over-fat hens and either get rid of them or put them in condition. The hen that stands around, and especially the one with the abdomen that bags down behind the legs, needs to be put in a pen by herself for a week with only a pan of water and a head of cabbage hung up so that she will have to jump for it. No other food.

SUMMER should be the easiest time in the world to raise chickens, but many people find it the hardest. This is largely a matter of sanitation and proper feeding.

CHICKS and fowls must have plenty of fresh green vegetable food and there is an unlimited quantity obtainable during the summer. They like such tender things as cabbage, lettuce, beet tops, etc., better than anything else and it is not so apt to clog up the crop as is grass or other stringy stuff.

GREEN vegetables should constitute at least one-third of the daily ration for chicks or fowls with two-thirds grain food, either whole or ground. The grain food preferably consists of equal parts of corn, wheat and oats. Ordinarily bulk oatmeal, cornmeal and graham flour is all right when the cheaper unsifted product is not obtainable.

LEE'S LOUSE POWDER

Many people ask us: "If Lee's Lice Killer will do the work, why do you also make the Louse Powder?"

There are some instances where lice are to be gotten rid of where the liquid lice killer is unsuitable. Lee's Liquid Lice Killer is a very strong article and cannot be used to as good advantage as the Louse Powder in several cases, such as for the occasional fowl that needs individual attention; the setting hen; the little chicks; for dog, horse or cow during mid-winter. In such cases a little of the powder applied and well rubbed in effects wonders.

1¼-lb. Sprinkler Top Cans 30 cts.

(40 cts. if by Parcel Post)

3-lb. Size 60 cts.

25-lb. Pails \$3.50

LEE'S Egg Maker and Chick Grower mixed with this ground grain food in a proportion of six teaspoonfuls to a quart of the ground feed is the proper proportion after six weeks of age. Prior to that time, as directed in our book, "Care of Baby Chick," the amount of the Chick Grower to be used

Keep Hens and Chicks Free from All Vermin and Disease

is one teaspoonful of Chick Grower to the quart of ground feed for each week of the chick's age up to six weeks.

CHICKS can be almost seen to grow when properly fed in this way. Pullets can be brought to laying at 4½ months and cockerels can be sent to market at 9 or 10 weeks old, or, if to be used for breeding next season, will be much earlier matured and naturally will be in better shape for the following spring.

YOUNG cockerels should be gotten to market just as quickly as possible, because they bring a higher price per pound earlier, which will generally more than offset any increase in weight. The pullets will also do much better when not bothered by a lot of cockerels. The eggs keep better.

I AM not giving in this little book much about diseases of poultry because this is fully covered in our other booklets, which you can have for the asking.

POUULTY raisers ought to preserve their summer eggs, when cheap, for their own fall and winter use and then they can sell their fresh eggs at high prices during the fall and winter.

SUMMER brings a good many skin troubles for chickens, especially the old ones. When the feathers of head, neck or body fall out or do not grow and there seems to be some reddening, inflammation or irritation of the skin, bathing or dipping in diluted Germozone will generally correct the difficulty.

GRIT should be supplied for chickens, both young and old. It is their teeth, by means of which they grind the food in their gizzards. Many are apt to overlook this through summer, thinking that the chickens

A hen doesn't lay because she wants to lay but because she is in laying condition and receiving right food.

I tried dozens of combinations during a period of two years before I hit on the right one. It sure does bring the eggs. I thought it pretty good when one pen of twenty-five hens averaged eighteen eggs a day all winter.

That was nineteen years ago, before the day of the 200-egg hen. Now, Lee's Egg Maker is regularly used on the larger poultry farms of the country. It is a Chick Grower as well as an Egg Maker.

2-lb. pkg. 35 cts.

25-lb. pail \$3.50

5-lb. pkg. 75 cts.

100-lb. drum 12.00

can pick up plenty of grit anywhere. If deprived of grit they are apt to pick up things that they should not have, such as tacks, small nails, lumps of salt or other improper material. Sand or round pebbles do not make good grit. Crushed rock or crockery is good.

WHEN using insect powder, it doesn't do a bit of good to just sprinkle it on their backs. It must be sprinkled on and then rubbed in through the fluff or feathers so as to get down to the skin where the lice are generally found.

THE Lee Sprayer, costing only 65 cents, is one of the handiest things in the world for use about the poultry house for spraying Lee's Lice Killer on roosts, etc., or for disinfecting the pens and yards either with Lee's Lice Killer or Lee's Dip.

DON'T forget to pack eggs for your own use. Eggs are almost always double the price in winter than they are in summer and when you can save 25 or 30 cents per dozen at a cost of only one cent per dozen for packing, it is more profit than you can make in any other way.

ONE of the greatest troubles to which stock of any kind is subjected during summer is flies and mosquitoes. Lee's Flyo-Curo is a liquid preparation which is sprayed lightly over the animal, forming a thin coating over the surface of the hair and protects the animals from the attacks of insect pests.

OUR Flyo-Curo does not soil or gum the hair or skin and can be readily washed off if desired. This may seem objectionable to some on account of the fact that exposure to rain will remove a coating recently applied, but when it is considered that continued application of oily substances will cause the hair to matt and gum and finally become very unsightly and impossible to

This is a good, reliable, safe Conditioner for stock; for horses, colts, cattle, calves, sheep, or hogs.

Work animals, growing stock, and those on full feed or fattening ration, need an occasional tonic, corrective, or digestive assistant, and our Best Conditioner is especially valuable because it is all of this and more; it contains elements that act gently on the bowels and aid in keeping the animals free from worms.

As one of our dealers said recently: "I am thinking more and more of your Best Conditioner every year when comparing its work with that of other Stock Foods, Tonics and Condition Powders."

2-lb. Package	\$0.35
Postage paid, 40c.	
7-lb. Package	1.00
25-lb. Pail	3.50

Lee's Worm Powder

A splendid vermifuge or worm destroyer for horses, cattle, sheep or hogs.

1-lb. Package, 25c; 5-lb. Package, \$1.00;
25-lb. Pail, \$3.00.

remove, it will be seen that the easy washing off is a very valuable feature. It only takes a minute to go over the animal using a Lee sprayer, and the cost is negligible.

THERE is one further advantage in using the Flyo-Curo on horses and cattle. It keeps the animals free from lice and other vermin as well as protected from flies and mosquitoes. You will never find any horses or cows that are lousy when they are getting Flyo-Curo occasionally.

STOCK needs particular attention during summer if to be kept in good condition. Of course, work animals especially are worked hard and irregularly fed on dry winter rations or on green summer stuff and this in connection with the hot weather renders advisable the frequent giving of a good condition powder and especially one that has a tendency to keep the animals free from worms. For horses and cattle we especially recommend Lee's Best Conditioner. Lee's Best Conditioner is described and illustrated on page 15. If you have a horse or cow, try it and note the beneficial results.

FOR hogs there is nothing to compare with Lee's Hog Remedy, which is a conditioner, an appetizer, and a vermifuge or worm destroyer. This is worm powder mixed with other ingredients ordinarily known as Government Hog Mixture.

LEE'S Worm Powder is suitable for any kind of stock and is best where a remedy is intended for just the one thing, to rid the animal of worms. Any remedy of this kind must be given to the animals on an empty stomach. It does no good to give a dose of Worm Powder while stomach and intestines are full of other feed, because in such cases it would be necessary to give several times the ordinary dose in order to kill the worms and this might have a tendency to injure the animal.

Rub a fresh egg with Egg-o-latum. Set it away on end in a cool, dry cellar and it will keep perfectly fresh for one year.

Egg-o-latum is colorless, odorless, tasteless and non-poisonous. It protects eggs from air, moisture, odors, germs and decay. It is easily applied; no special utensils or preparation needed, and it costs only one cent a dozen. Can be sent to the country if desired and the eggs coated right from the nest.

Eggs coated with Egg-o-latum can be boiled, fried, poached or whipped, same as fresh eggs. In fact, they are fresh eggs.

Full directions are furnished with each package and complete satisfaction guaranteed if fresh eggs are used to start with.

Descriptive circular free.

Price Per Jar, 50 cts. Sufficient for
50 Dozen Eggs.

At our dealers or postpaid.

Easy to Double Your Money in Six Months with Egg-o-latum

A WORM powder or vermifuge is necessarily of the nature of a poison. That is, poisonous to worms but not poisonous to the animals in the amount sufficient to kill worms when given on an empty stomach unmixed with other food except the amount necessary to carry it through, thereby reaching in proper strength the parasites which it is intended to destroy.

OUR book entitled "Mostly About Pork" gives a great deal of valuable information about caring for hogs and pigs in summer and fall. We advise that everyone interested in Hogs get a copy of that book. It is free for stamp.

A HOG is not generally a dirty animal if allowed an opportunity to keep clean. They select a mud wallow not from any desire to make themselves dirty, but to rid themselves of vermin. They much prefer a clean bath of pure water and dip. Troughs and swill barrels need more attention during summer than during any other time of the year, because they more quickly get filthy and breed disease. A Lee Sprayer filled with Lee's Dip or Lee's Lice Killer is mighty handy for spraying these utensils and properly purifying and disinfecting them.

AT the spring change of feed, when animals again get plenty of green vegetable stuff after having gone all winter without, careful attention is needed to their general condition, especially the bowels. A little Lee's Hog Remedy or Lee's Best Conditioner fed at the proper time will often save a lot of future trouble.

IN our book, "Mostly About Pork," will be found information about fall work in butchering, curing hams and bacon, smoking meat, etc.

THE LEE SPRAYER

The Lee Sprayer is a handy little article for use about the hog pens, poultry house and garden. It will spray straight up, as well as any other direction, which is something no other hand sprayer will do unless the tank is full.

It throws a fine mist or spray and is especially valuable for spraying poultry roosts, hog bedding, feed troughs and swill barrels, plants, shrubbery, etc. It will also spray strained, creamy whitewash, but is hardly suitable for extensive whitewashing.

The Lee Sprayer is made of tin, painted or japanned, and is very substantial and durable if properly cared for.

Price Only 65 Cents
(80 Cents if by Parcel Post)

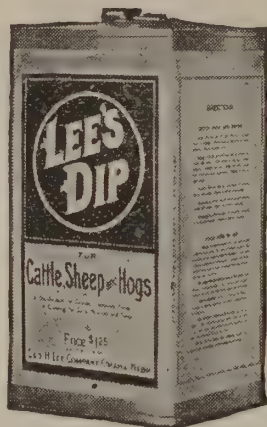

LEE'S SMOKE FLAVOR

is used for smoking hams and bacon. It is simply painted on the surface of the meat and permitted to stand for a few days until the flavor has penetrated through the meat. It is directly prepared by distillation of heated wood; is handier and safer than the old smokehouse.

12-oz., 50c; 32-oz., \$1.00;
32-oz. Express paid, \$1.25

LEE'S DIP

is an emulsion of coal tar oil and is used as a disinfectant, as a remedy for mange, itch, etc., and as an insecticide for killing lice, mites, ticks, etc. Much of the value of any dip lies in the making.

Good materials improperly combined cannot produce the same good results as when correctly and properly finished. Good dip making is no task for the careless or inexperienced.

Always uniform in strength and quality. Rated 1 to 71; contains less than 10% inert—water.

In Fifty-Gal. Barrels, per gal..... 1.00

In Five-Gal. Cans, per gal..... 1.25

In One-Gal. Cans, per gal..... 1.50

In Half-Gal. Cans, each..... .90

FOR smoking meat the ordinary method is to hang the hams or bacon in a smoke house, where the meat gradually absorbs the smoky vapor. Lee's Smoke Flavor is a liquid prepared by the heated distillation of wood and is applied to the surface of ham or bacon with a brush or sponge. The liquid itself does not penetrate the meat to any considerable extent, but the flavor does and especially if the ham or side of bacon is put in a paper sack after the Smoke Flavor is applied. It gives just the same result as when the smoke is applied in the old way.

PEEERLESS Gopher Killer is a liquid prepared by us for killing ground squirrels, gophers, prairie dogs and other burrowing animals. It will kill any animal if confined with it in small space. Put a rat in the bottom of a tall pail or milk can, pour in a teaspoonful of Peerless Gopher Killer and the rat will be dead in two minutes without even covering the top of the can. In quart cans, 75 cents.

AN old paint-dried brush soaked over night in Lee's Lice Killer will come out 'most as good as new, and the liquid can then be used for painting on the poultry roosts.

IN a country where electrical storms are prevalent, hogs and other animals are often killed by lightning when standing close to a wire fence. This can be prevented by making a ground connection every few rods. This is best done at the time the posts are set by tacking to the post a strip of copper or galvanized iron extending from the bottom of the post to as high on the post as the wires go. Put this on the side of the post next to the wires, and staple the wires to the strip.

IF the posts have already been set, ground connections can be attached by wrapping a bare galvanized strip or wire tightly around each strand and bury the other end as deeply as possible in the ground.

WHERE wire fences are not grounded cattle or hogs may be killed a mile away from the point where the lightning strikes, because the electric current follows along the wires until it is able to pass into the ground through the body of an animal leaning against it or standing near.

MANY farmers owning their own places are now equipping their farms with electric lighting plants whereby any corner of the house, barn, stables, poultry house, etc., may be lighted instantly day or night.

Follow the "Lee Systematic Way" in Poultry Work

A COMPLETE electric plant costs anywhere from \$200.00 to \$500.00 and a farmer who has such a plant, together with a water system, rural free delivery, telephone and an automobile, need not yearn for the conveniences of city life.

CITY people are generally looking forward to the time when they can move to the country; not to a small town, but to the real country. They are tired of the shams, the hardships, and the inconveniences of city life.

MANY farmers look forward to a life in town, not realizing that a holiday soon palls if too long continued and that there is nothing that will send an active worker to the grave so quickly as continued loafing.

ONE of the worst wastes on a farm is through land taken up and practically overrun by quack grass, Canada thistle, morning glories, sunflowers, etc. Alfalfa is said to be the best source of redemption for such land.

A MR. COLE had a 55-acre field of Canada thistle and was in a quandary as to what to do with this land, until he conceived the idea of sowing it with alfalfa. The land was plowed in the late fall and in the spring the entire field was seeded with alfalfa and with a nurse crop of barley. The barley came fine and so did the thistles. There were 55 solid acres of them.

IT looked as if the whole tract would have to be plowed up again, but it was finally decided to mow the field close to the ground and rake and stack the barley and thistles. In a short time Mr. Cole had another crop, this time of alfalfa and thistles instead of barley and thistles. This was again mowed and raked and you should have seen the alfalfa grow. This time there was nothing but alfalfa and a good stand of it.

IMPORTANT—PLEASE READ

There is no one magical thing that will make hens lay. Some hens will not lay at all—or very little. They are not built or bred right. They must be weeded out. No dairy man would feed a hundred cows while getting milk from only fifty.

Be sure and read our “14 points in Egg Production” and “Culling the Slacker Hens” and read page 7 of this book a second time. If you will cull down to the real layers, then keep them clean and healthy, free from vermin and properly fed and housed, you cannot fail to make a good profit.

Any of our books or pamphlets can be obtained from any of our dealers. If they do not have them it is simply because they have not asked for more. Insist or write us.

I want you to believe me when I say that it gives me more pleasure to know that my advice has helped you to better success than it does to sell you a bill of goods. I have often shown owners of other makes of incubators how to operate them successfully when their own manufacturers could not do so.

Of course, I believe that goods I have designed are the best for the purpose always, because if I did not believe and know that, I wouldn't be making them. But, whether you use Lee goods or not I will be glad to help you at any time.

Read again Pages 7, 13 and 17. It will pay you to use regularly Germozone and Egg Maker and to put down your summer eggs for your own winter use. Then you can sell your winter eggs at high prices.

Flyo-Curo

This is an economical and fully adequate remedy for protecting stock from flies and mosquitoes. It does not gum or mat the hair. It keeps the animals rid of lice. Can be washed off when desired and does not blister or remove the hair when used as directed.

Very easily applied with the Lee Sprayer. It takes less than a minute to spray a light coating all over the animal and very little of the liquid.

At Dealers

Quarts, 60c; Half Gals., 90c; Gallons, \$1.50

Lee's White Diarrhoea Remedy

This is a good medicine for any form of bowel complaint in chicks or fowls and for the dreaded white diarrhoea is the only really satisfactory treatment that has come to our notice. It does not replace Germozone for the prevention of these and other disorders, but is a medicine pure and simple and is valuable to have on hand when needed or where the simpler antiseptic use of Germozone does not produce the desired result.

12-oz. Bottle, 50 cts. Not Mailable.

Concentrated form (in 1-oz. bottle, to be diluted with water to 12 oz.), **50c postpaid.**

Liniments

Lee's Germozone is best for swellings, skin diseases, loss of hair, saddle galls, chafings, sores or wounds.

Lee's Dip, diluted with 50 parts of water, is good for any wounds or skin disorders and is a strong germicide, disinfectant and insecticide.

Lee's Flyo-Curo is good for sores, cuts, galls or wounds.

Lee's Lice Killer is fine as a blistering liniment and especially for deep-seated skin disease, such as mange. Do not cover or bandage or it will blister.

Lee's Head Lice Ointment

This is a medicated petrolatum and is used principally for head lice on chicks or fowls, but is also suitable as an application for cuts, sores, skin disorders, etc.

15 cts. Per Package. Mailable.

Lee's Hog Remedy

is fully described in our book, "Mostly About Pork." It is more needed in Fall than at any other time of year. It is a worm destroyer and conditioner. Not a "cholera cure," but a mighty good help to keep them in shape so they will not "take" it.

25-lb. Pail, \$3.00; 100-lb. Drum, \$10.00.

About Deliveries

Our products are easily obtainable from dealers at most towns. If not at your town, we certainly have an agent not far away, so don't be humbugged by dealers telling you they "can't get the Lee goods" or offering something "just as good" on which they make more profit because of poor quality. At smaller cities and towns we usually sell one dealer only, so try them all or write us for the name.

On advertising pages herein we give delivered prices on small lots. In large quantity we pay all freight on an order for \$6.00 or more, at regular prices quoted herein.

We pay freight on \$4.00 orders to points in Nebraska or Iowa; on \$6.00 amounts to other adjoining states; on \$10.00 amounts anywhere in United States.

Gallon cans of Lee's Lice Killer we deliver, express paid, for \$1.50. Our liquid insecticides are not mailable.

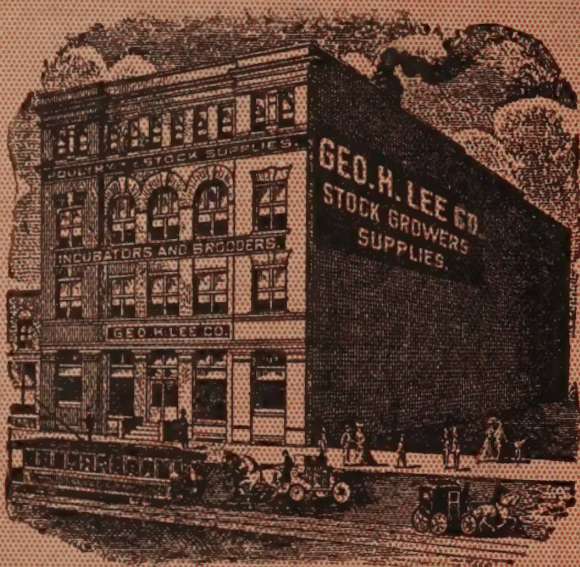

35-cent packages of Egg Maker and Best Conditioner we deliver by mail free at 45c per package.

Germozone in tablet form, delivered by mail, 75c and \$1.50 per package. Liquid not mailable.

Any liquids of value \$1.00 or more we can deliver express paid for 25c extra for each dollar of value.

Send all orders and remittances to
